

Module 02

Ansible Inventory

DevOps end to end services & solutions

Agenda

- > What is Inventory?
- > Inventory Groups
- > Inventory is a list of machines Ansible manages
- > Hands-On Lab-02

What is Inventory?

Ansible Inventory is a configuration file or script defining the hosts, servers, and devices (the "who") that Ansible manages, typically organized by groups for automation in playbooks. It lists IP addresses, SSH credentials, and connection settings, allowing Ansible to automate tasks—like software deployment or configuration changes—across target infrastructure, commonly formatted in INI or YAML

Example of ini file

```
[slaves]
172.17.0.2 ansible_user=ansible ansible_ssh_private_key_file=/id_rsa
```

Example of yaml file

```
tee inventory.yml > /dev/null <<EOF
all:
  children:
    slaves:
      hosts:
        slave-node:
          ansible_host: ansible-slave
          ansible_user: ansible
          ansible_ssh_pass: ansible
          ansible_python_interpreter: /usr/bin/python3

EOF
```

Inventory Groups

Ansible Inventory is a configuration file or script defining the hosts, servers, and devices (the "who") that Ansible manages, typically organized by groups for automation in playbooks. It lists IP addresses, SSH credentials, and connection settings, allowing Ansible to automate tasks—like software deployment or configuration changes—across target infrastructure, commonly formatted in INI or YAML

Example of Group hosts

```
tee inventory.yml <<EOF
all:
  children:
    master:
      hosts:
        master-node:
          ansible_host: 172.17.0.2
          ansible_user: ansible
          ansible_ssh_private_key_file: /id_rsa

    slaves:
      hosts:
        slave-node:
          ansible_host: 172.17.0.2
          ansible_user: ansible
          ansible_ssh_private_key_file: /id_rsa

  cluster:
    children:
      master:
      slaves:

EOF
```

Inventory is a list of machines Ansible manages

Where to connect

How to connect

**Which hosts
belong to
which
groups**

**Automate
tasks**

Inventory is a list of machines Ansible manages

Inventory –syntax-check

Syntax-check an Ansible inventory

Inventory –verbose

Inventory debugging

Inventory is a list of machines Ansible manages

Inventory --list

inspect your inventory, which is exactly
what ansible-inventory

Inventory --graph

Prints a tree view of groups and hosts

Hands-On – Lab 01, 02

Getting Started

In this lab, we will explore the basics of Ansible.

- > Install ansible based on Docker
- > Create Inventory file
- > Create Inventory file with group
- > Practice ssh key

Questions?

Thank you for participating.
